NORTHEASTERN WATERSHEDS MANAGEMENT PLAN, ST. CLAIR COUNTY, MICHIGAN

This Watershed Management Plan (WMP) was developed for the purposes of fulfilling Phase II storm water requirements for local public entities and to provide a comprehensive storm water management plan that will improve and protect water quality across the land area known as St. Clair County's Northeastern Watersheds (NEW). This plan is a comprehensive document that describes the status and conditions of the NEW, sets appropriate goals and objectives, and describes specific actions that will be used to protect, restore, and enhance the unique and valuable natural and fisheries resources in the watersheds. The NEW Watershed Management Plan specifically describes the following: Current health status and conditions of waterways, Goals and objectives for storm water and land use management, Recommended management actions that will meet the WMP's goals and objectives, Actions that each Phase II entity will be implementing in the next two to five years, Actions that each Phase II entity wishes to implement but does not have the resources to implement at present, Actions that will assess the condition of waterways and evaluate the storm water and land use management activities being implemented, Strategies to sustain the planning and implementation process.
