

## THE INDIANA AGRICULTURE NUTRIENT ALLIANCE

The [Indiana Agriculture Nutrient Alliance \(IANA\)](#) is a non-profit organization that brings together agriculture groups, government agencies, conservation organizations and academics working to improve soil health and nutrient management practices across the state.

The [IANA's 14 partner organizations](#) collaborate to identify opportunities to jointly enhance their programs and advance the shared goals of reducing agricultural nutrient loss and improving water quality. The IANA seeks to bridge multi-partner efforts to realize significant, positive impacts across Indiana by focusing on four areas:

1. Establishing shared goals for statewide practice adoption that encourage fertilizer and nutrient loss reductions.
2. Identifying shared opportunities for partner organizations to maximize awareness, support, and implementation of strategic objectives.
3. Sharing information to develop best management practice educational materials for farmers and stakeholders to encourage fertilizer and nutrient loss reductions.
4. Assisting partner organizations with pursuing collaborative nutrient-focused research and compiling outcomes.
