STATE AND PROVINCIAL PORT INFRASTRUCTURE INVESTMENT PROGRAMS

Some Maritime Transportation System (MTS) states and created their own maritime-specific funding programs, which are often intended to help ports pay for infrastructure upgrades, or improve connections to highways and railroads. This investment page provides examples of unique state and provincial programs that are explicitly intended to support maritime investments, or which have supported maritime investments in the past. In addition to the programs listed here, some states and provinces have general infrastructure or economic development grant programs for which maritime projects may be eligible, as well as nationally-mandated and state-administered freight investment programs. Therefore, the list of programs below is not comprehensive, instead it illustrates the diversity of state and provincial tools that have been used to invest in the maritime transportation system and provide opportunities for increased trade and traffic.

- Minnesota Port Development Assistance Program
- Quebec Provincial Support Program for Investments in Marine Infrastructure
- Wisconsin Harbor Assistance Program
